a) A Since they have Relatively more labor compared to Capital Stock, they have more than twice as much labor than Capital. While Country B "only" have twice as much labor as Capital

b) COUNTRY B Will have comparative advantage in production of S, Because they are relative more Capital abundant, Country B have half as much Capital compared to labor, but Country A have even less than half.

c) COUNTRY A will import S, since they are relatively more labor abundant, Country A will therefore import capital intensive goods and Good S is more capital intensive.

Examiner's remarks:

The HO-theorem says that countries
and ~~it~~ are either more Capital
abundant or ~~it~~ they are more
Labor abundant

The relatively more labor abundant
country will produce and export
Labor intensive goods, and import
Capital intensive goods.

The capital abundant country
will produce and export capital
intensive goods, and import labor
intensive goods

Leontief assumed that USA was the most capital abundant country in the world, and would therefore export capital intensive goods and import labor intensive goods. He tested it after WW2 and found that the US exported labor intensive goods and imported capital intensive goods.

He did it with studying which goods were exported and imported.

the HEST was not a complete test of the model because the US must import goods as oil, which is capital intensive since they don't have a domestic production of oil.

4

a) They would pay up to, and including the Quota Rent, since they would make a large profit by exporting

b) The domestic consumption will go up since they will have more of the good.

The domestic supply will decrease since they will have more competition in form of the exporting country's goods, some firms will not be able to produce at the new price and close down their businesses

DWL B D

Net Welfare - B - D + E

World market price will go from PFT to P_w because the importing country is large and therefore have a significant effect on the world market price

Examiner's remarks:

*producer surplus will increase
with A

*Consumer surplus will decrease
with A, B, C, D

*Government Revenue will be C, E

*Deadweight loss will be B, D

A Voluntary export Restraint will always be more costly for the importing country because they will not gain Government Revenue that they otherwise would have gain from a import tariff. The Government Revenue that the importing country would have gained with a import tariff, is kept in the exporting country with a voluntary export Restraint.
